

## Salvia splendens Red Alert

Life cycle	Annual
Family / Origin	Lamiaceae / Brasil
Popular uses	Pots and packs, outdoor containers, hanging baskets, landscape, beds and garden
Mature plant height	30-35 cm (12-14")
Mature plant width	30-35 cm (12-14")
Pot size	Packs, 10-15 cm (4-6") pots
Plants per pot	1 plant per pot 3 per 15 cm (6") and larger
Sun exposure	Sun / Partial shade
Water requirements	Reduced, avoid wet conditions
Flowering time	Entire growing season Frost tender
Media	A well-drained, porous media is best to prevent over watering pH 6.0-6.2 EC 0.7-1.5 (105-225 ppm N)
Growing temperature	Start at 18-20°C (64-68°F) After rooting, reduce temperature to 15-18°C (59- 64°F) Avoid wet conditions at night
Light	Salvia prefers high light conditions
Fertilizer needs	Balanced N:P:K fertilizer as needed recommended, use calcium based fertilizers EC 1.8-2.2 (270-330 ppm N)
Crop time	10-12 weeks
Hardiness zone	N/A

**Description** Fiery red flower spikes that contrasts well with its dark green foliage

## **Growth regulators**

Salvia is responsive to B-Nine, A-rest, Bonzi and/or Sumagic treatments

**Common diseases** Alternaria Leaf Spot, Powdery Mildew, Rust and Corynespora Leaf Spot.

**Common pests** Thrips, Aphids, Whitefly and Spider Mites

Pinching No need

## **Plug Production**

Seed forms	Raw
Seed count	250-300 seeds/gram (7.000-8.500 seeds/oz); varies per lot!
Recommended plug size	480-264
Seeds cell	1
Vermiculite cover	Light cover
Stage 1 Germination	Keep medium saturated Growing medium temperature: 22-24°C (72-75°F) Fertilizer level EC 0.5-1.0 (75-150 ppm N) Light is required for the germination process; provide 100-1.000 lux (9-90 fc) in the germination chamber
Stage 2 Stem and cotyledon	Reduce moisture levels to achieve optimal root penetration and to avoid fungal diseases Avoid wet foliage after nightfall Temperature: 18-20°C (64-68°F) Fertilizer levels: EC 0.5-1.0 (75-150 ppm N)
Stage 3 Growth and development	Reduce moisture levels and allow medium to dry between watering, but do not allow plants to wilt Temperature: 18-20°C (64-68°F) Fertilization: EC 1.2-1.5 (180-225 ppm N)
Stage 4 Ready for transplanting	Reduce moisture levels and allow medium to dry slightly between watering, but do not allow plants to wilt Temperature: 15-18°C (59-64°F) Fertilizers: see stage 3 To prevent premature flower bud formation, it is important not to stress the plugs
Plug crop time	4-5 weeks
Approximate finish time	5-7 weeks
Special tips	Salvia prefers high light conditions. Low light levels can cause stretching. Downward cupping and yellowing of leaves can indicate too low temperatures or too high EC level in the compost. Yellowing on mature leaves is often associated with a Magnesium deficiency
